Abstract:-

“Information and Communications Technologies (ICTs) are a diverse set of technological tools and resources used to communicate, and to create, disseminate, store, and manage information. Communication and the information are at the very heart of the educational process, consequently ICT-use in education has a long history. ICT has played an educational role in formal and non-formal settings, in programs provided by governmental agencies, public and private educational institutions, for profit-corporations and non-profit groups, and secular and religious communities. The scenario of the classroom is changing. there's a technological gap between the progress of the society and instructional activities of the teacher within the classroom. If we see in our society on the one hand technology has revolutionized our society and on the opposite hand the teaching learning activities at college level have remained thus far faraway from technology. In our classroom the knowledge is imparted by the teacher in an ancient way, an educator centric mode which is most of the time boring and to not gain interest to the scholar. But present 21st Century education is student centric education.

Keywords:-

ICT, technology,, student teacher learning , teacher training.

I. INTRODUCTION

Globalization has brought about an immense change in every walk of life right from the habits of eating to habits of working. How education sector can be exception to this alteration? It has gone through a great change in the country like India. We have moved from our ancient heritage education system of Gurukula to the modern day techno-savvy university education system.
